

HACKATHON DAY FIVE

TESTING , ERROR HANDLING , AND BACKEND INTEGRATION
REFINEMENT

Date 20-1-25

TESTING, ERROR HANDLING AND BACKEND INTEGRATION REFINEMENT

OBJECTIVE:

The goal of Day 05 focuses on preparing the marketplace for real-world deployment by ensuring all components are thoroughly tested, optimized for performance and ready to handle customer-facing traffic.

This document summarizes testing results for the marketplace application, focusing on key features like product listing, cart functionality, API error handling, mobile responsiveness, checkout, price sorting and search filtering.

KEY- LEARNING OUTCOMES

Comprehensive Testing

- * Validate all features and backend integration
- * Ensure functional, non-functional and user acceptance testing is completed.

Error Handling

- * Implement user-friendly error messages and fallback mechanisms.
- * Gracefully handle API errors with fallback UI elements.

Performance Optimization

- * Enhance speed, responsiveness and reliability.
- * Conduct performance testing to identify and fix.

Cross-Browser and Device Compatibility

- * Test for seamless functionality across multiple browsers and devices.
- * Security Testing
- * Identify vulnerability and secure sensitive data.

Documentation

- * Create professional testing reports (CSV-based) summarizing results and resolutions.
- * Prepare deployment ready documentation with best practices.

STEP 1: FUNCTIONAL TESTING

Ensure the marketplace's "Bismillah" key features operate as intended, delivering a smooth and error-free user experience.

Key Features To Test

Product Listing: Verify products are displayed.

Product Details: Ensure product detail pages show

Category Filters: Test that filters return precise.

Dynamic Routing: Validate seamless navigation.

Add To Cart: Confirm items can be added in the cart.

Add To WishList: Ensure products can be added.

to and managed in the wishlist.

Responsive Design: Validate that all features and pages adapt seamlessly to various screen sizes.

User Profile Management: Check that users can update personal information, view order history and manage saved addresses.

STEP 2: ERROR HANDLING

Implement robust error handling mechanisms to ensure a smooth user experience, even when issues arise by displaying clear and user-friendly fallback messages.

Key Areas To Address In Error Handling

Network Failures: Display a meaningful error message when there are connectivity issues.

Invalid or Missing Data: Handle cases where API responses return incomplete or invalid data.

Unexpected Server Errors: Use generic fallback messages for unhandled server-side errors.

API Error Handling: Use try - catch blocks to gracefully manage API errors.

Fallback UI Elements: Provide alternative content when data is unavailable.

Form Validation Errors: Validate user inputs on both the frontend and backend to avoid

invalid data submissions.

STEP 3: PERFORMANCE OPTIMIZATION

Optimize the marketplace to improve load times, responsiveness and overall performance. This step involves identifying bottlenecks and applying strategies to enhance the user experience.

Key Areas To Address

Image Optimization: Compress images using tools like Tiny PNG or Image Optim to reduce size.

Lazy Loading: Implement lazy loading for images and assets to defer loading until needed improving initial load times.

Minification: Minify Javascript (Using Terser) and CSS to reduce file size for faster loading.

Remove Unused Code: Eliminate unused CSS and Javascript to further reduce file sizes.

Implement Caching Strategies: Browser Caching stores static assets in the user's browser to avoid repeated network requests.

Service Workers: Cache resources and improve offline functionality using service workers.

STEP 04: CROSS-BROWSER AND DEVICE TESTING OR RESPONSIVE DESIGN

- Used Browserstack to verify the marketplace's responsiveness across major browsers: Chrome, Firefox, Safari and Edge. The design was also tested on multiple physical devices (mobile phones and tablets) to ensure usability.

Mobile Responsiveness

A toggleable sidebar was added for mobile users improving navigation. The layout adapts seamlessly to different screen sizes, ensuring a user-friendly experience across devices.

STEP 05: SECURITY TESTING

Ensure the security of your marketplace by identifying vulnerabilities and implementing measures to protect sensitive data and prevent attacks.

Input Validation: Sanitize all user inputs to prevent SQL injection, cross-site scripting (XSS) and other injection attacks. Use regular expressions to validate fields like email addresses, phone numbers and other critical inputs.

Secure API Communication: Ensure all API calls are made over HTTPS to encrypt data in transit.

Avoid exposing sensitive information such as API keys in the frontend code. Store them securely in environment variables.

Authentication & Authorization: Implement secure user authentication mechanisms like JWT (JSON Web Tokens) and OAuth. Ensure proper authorization checks are in place to restrict access to certain features or resources.

Cross-Site Request Forgery (CSRF) Protection:

Implement anti-CSRF tokens to prevent unauthorized actions from being executed on behalf of an authenticated user.

Security Headers:

Set HTTP security headers like Content-Security-Policy (CSP), X-Content-Type-Options and Strict-Transport-Security (HSTS) to enhance security.

Vulnerability:

Use tools like OWASP or Burp Suite to scan your marketplace for common security vulnerabilities and fix identified issues.

STEP 06: USER ACCEPTANCE TESTING (UAT)

Ensure that the marketplace meets user expectations and provides a seamless, intuitive experience before final deployment.

User Feedback: Involve peers, stakeholders or potential users in testing to gather valuable feedback. This will help identify pain points or areas for improvement.

Usability Testing: Verify that the user interface is intuitive and easy to navigate.

Edge Cases: Test edge cases such as handling large product inventories, unusual search queries.

Device and Browser Compatibility: Confirm that the user experience remains consistent across different devices.

CONCLUSION:

By the end of Day 05, the marketplace is now fully optimized, functional and responsive, with robust error handling mechanisms and fast load times. The successful completion of testing and optimization ensures that users will have a smooth and enjoyable experience on both desktop and mobile devices.

Nike Air Force 1 Mid '07

The Nike Air Force 1 Mid '07 is a reimagining of the iconic Air Force 1, first introduced in 1982. This model features a mid-top silhouette that offers added ankle support, making it ideal for those who need extra stability while on the move. Crafted from premium leather, the Air Force 1 Mid '07 offers both style and durability, making it perfect for everyday wear. The classic design, paired with modern touches, ensures these sneakers are not only a nod to heritage but also a versatile piece for contemporary fashion. The adjustable ankle strap adds to the customization, allowing you to wear them in your own unique style.

Nike Dri-FIT Ready

The Nike Dri-FIT Ready is a versatile fitness top that is ideal for high-intensity workouts. Made with Dri-FIT technology, this top pulls sweat away from your skin, ensuring that you stay cool and dry even during the most strenuous exercises. The lightweight, stretchy fabric allows for unrestricted movement, making it perfect for activities like running, yoga, or weight training. The sleek design and breathable material also make it great for casual wear or lounging around. With its modern fit and stylish appearance, the Nike Dri-FIT Ready top is a must-have for anyone who values both comfort and style in their activewear. Whether you're working out or just relaxing, this top offers all-day comfort and support.

Comprehensive E-commerce Platform Testing Report - Q3 2024						
Test Case ID	Test Case Description	Test Steps		Expected Result	Actual Result	Status
		Step 1	Step 2			Severity Level
TC001	Product Grid Rendering	1. Load product page	2. Check product cards	Products display correctly with images and details	Products render as expected	Passed
TC002	Add to Cart	1. Click add to cart	2. Check cart count	Product added to cart and count updated	Works as expected	Passed
TC003	Wishlist Feature	1. Click wishlist icon	2. Check wishlist state	Product added to wishlist with visual feedback	Works as expected	Passed
TC004	Error Handling	1. Trigger API error	2. Check error message	Error boundary shows friendly message	Works as expected	Passed
TC005	Performance	1. Run Lighthouse	2. Check scores	Score > 90 for all metrics	Achieved 95+	Passed
TC006	Responsive Design	1. Resize browser window	2. Check layout	Layout adjusts for mobile and desktop	Works as expected	Passed
TC007	Search Functionality	1. Enter search term	2. Check results	Search returns relevant products	Works as expected	Passed
TC008	Filtering	1. Select category	2. Check filtered products	Products filtered by category	Works as expected	Passed
TC009	Sorting	1. Select sort option	2. Check sorted products	Products sorted by selected option	Works as expected	Passed
TC010	Product Details	1. Click product	2. Check details	Product details displayed correctly	Works as expected	Passed
TC011	Wishlist Persistence	1. Add product to wishlist	2. Refresh page	Wishlist persists across page reloads	Works as expected	Passed
TC012	Cart Persistence	1. Add product to cart	2. Refresh page	Cart persists across page reloads	Works as expected	Passed
TC013	User Authentication	1. Login	2. Check authenticated state	User authenticated successfully	Works as expected	Passed
TC014	User Registration	1. Register new account	2. Check registration status	User registered successfully	Works as expected	Passed
TC015	User Profile	1. Navigate to profile page	2. Check profile data	Profile details displayed correctly	Works as expected	Passed
TC016	User Logout	1. Logout	2. Check logout state	User logged out successfully	Works as expected	Passed
TC017	Admin Dashboard	1. Navigate to admin dashboard	2. Check dashboard	Admin dashboard accessible	Works as expected	Passed

How would you like to get your order?

Customs regulation for India require a copy of the recipient's KYC. The address on the KYC needs to match the shipping address. Our courier will contact you via SMS/Email to obtain a copy of your KYC. The KYC will be stored securely and used solely for the purpose of clearing customs (including sharing it with customs officials) for all orders and returns. If your KYC does not match your shipping address please click the link for more information. [Learn More](#)
